(a) Which method wins where, and the routing rule
mean Spearman ρ
mean escape probability $\bar{P}_{esc}$
P_{esc} alone
MIA/PMIA
IRIE
push PPR rule-α
escape rule-α
MC 50
MC 200
MC 200
P_{esc}
(b) The router is above the accuracy/cost frontier
per-instance oracle selection
mean Spearman ρ
mean wall clock per instance (ms, log scale)
P_{esc} alone
MIA/PMIA
IRIE
push PPR rule-α
escape rule-α
MC 50
MC 200
ROUTER (0.948)
(c) Three buckets are enough
mean Spearman ρ (5-fold CV)
0.917
0.936
0.935
0.948
0.936
0.948
0.945
none
2 @.50
2 @.875
3 @.625/.875
4
8
16
(d) Thresholds transfer across a 9 × change of scale
mean Spearman ρ at n = 100
0.9335
0.9527
0.9524
best single method
router, thresholds from n = 100
router, thresholds from n = 900
